UCS	

2. Use-Case Specification

2.1 Account Management

2.1.1 Use-case: Sign in

Use Case	Sign in
Brief Descriptions	This function allows users who already have an account to log into the system to access personalized features.
Actors	Candidates, Recruiter, Moderator, Admin
Main Flow	<ol style="list-style-type: none"> 1. The system displays the login interface, presenting options for different sign-in methods (e.g., input fields for username/password, "Sign in with Google" button). 2. The user chooses a sign-in method. 3. The system proceeds based on the chosen method.
Alternative Flows	<p>3A. User chooses to Sign In by Account:</p> <ol style="list-style-type: none"> 1. The user enters their username (or email) and password into the respective fields. 2. The user clicks the "Sign In" button. 3. The system authenticates the login information against its internal database. 4. If authentication is successful: The system creates a login session for the user and redirects them to the homepage or a landing page. 5. If authentication fails (e.g., incorrect username/password, account locked): The system displays an appropriate error message (e.g., "Incorrect username or password. Please try again.", "Your account has been locked.") and prompts the user to re-enter information or choose another method. 6. If user forgets password: The user clicks the "Forgot Password" link. (Refer to Use Case: Forgot Password). <p>3B. User chooses to Sign In by Google OAuth:</p> <ol style="list-style-type: none"> 1. The user clicks the "Sign in with Google" button. 2. The system redirects the user to Google's authentication page. 3. The user logs into their Google account (if not already logged in) and grants permission to the application. 4. Google authenticates the information and sends an authorization code back to the system. 5. The system uses the authorization code to obtain an access token from Google. 6. The system uses the access token to retrieve basic user information from Google (e.g., email, name). 7. The system checks if the email from Google already exists in the system. 8. If email exists: The system links the Google account with the existing internal account (if not already linked) and creates a login session. 9. If email does not exist: The system creates a new account for the user based on the information from Google and creates a login session. 10. If the user denies permission: Google notifies the system of the denial. The system displays a message: "You have denied access. Please try again or log in using another method." The system returns to the login interface. 11. If user information cannot be retrieved from Google: The system displays an error message: "Could not retrieve Google account information. Please try again later." The system returns to the login interface.

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

	12. If successful (steps 8 or 9), the system redirects the user to the homepage or a landing page.
Pre-conditions	<ol style="list-style-type: none"> 1. The user already has an account in the system (for "Sign In by Account") or a Google account (for "Sign In by Google OAuth"). 2. The system is operational and has an internet connection. 3. For Google OAuth, the system is properly configured with Google OAuth credentials.
Post-conditions	<ol style="list-style-type: none"> 1. The user successfully logs into the website. 2. The user is redirected to the appropriate landing page based on their role (e.g., candidate dashboard, Recruiter dashboard, moderator panel). 3. Personalized user data (e.g., name, role, profile info) is loaded and available for session-based use.
Special Requirements	<ol style="list-style-type: none"> 1. Interface: The login interface must be clear, secure, and easy to use, providing clear options for different sign-in methods. 2. Processing Time: Authentication and login time should be minimal (ideally under 3 seconds). 3. Security: <ul style="list-style-type: none"> - Passwords for internal accounts must be encrypted during transmission and storage. - The system should have mechanisms to prevent brute-force attacks (e.g., account lockout after multiple failed attempts). - All OAuth tokens and sensitive data for Google OAuth must be handled securely. - Password reset links must have an expiration time and be single-use. - Connectivity: Stable connection to authentication services (internal database, Google OAuth services).
Prototype	

2.1.2 Use-case: Sign out

Use Case	Sign out
-----------------	----------

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

Brief Descriptions	This function allows a logged-in user to securely end their session and log out from the system.
Actors	Candidates, Recruiter, Moderator, Admin
Main Flow	<ol style="list-style-type: none"> 1. The user, while logged in, clicks on the "Sign out" button on the navigation bar. 2. The system invalidates the user's current session (e.g., clears session cookies, invalidates tokens). 3. The system redirects the user to the login page or a public homepage.
Alternative Flows	N/A
Pre-conditions	The user must be currently logged into the system.
Post-conditions	The user successfully logs out of the website.
Special Requirements	<ol style="list-style-type: none"> 1. Security: Ensure that all session data and tokens are properly invalidated on logout to prevent session hijacking. 2. User Experience: Provide a clear and easily accessible "Sign out" option.
Prototype	N/A

2.1.3 Use-case: Register Account

Use Case	Register Account
Brief Descriptions	This use case allows new users to create an account on the platform. Candidates can use the platform immediately after registration. Companies (Recruiter users), however, must wait for moderator approval before they can post jobs or access recruiter features.
Actors	Candidate, Recruiter
Main Flow	<ol style="list-style-type: none"> 1. User accesses the "Sign Up" page. 2. User selects the account type: <ul style="list-style-type: none"> - Candidate - Company 3. User fills in the registration form: <ul style="list-style-type: none"> - For Candidates: <ul style="list-style-type: none"> o Full name o Email o Password o Confirm password - For Companies: <ul style="list-style-type: none"> o Company name o Company email o Password o Confirm password o Tax code o Business license number 4. User submits the form.

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

	<p>5. System validates input and checks for duplicate email.</p> <p>6. System creates a user account and stores information:</p> <p>7. Candidate: status = active, can log in immediately</p> <p>8. Company: status = pending approval, cannot post jobs yet.</p> <p>9. System sends welcome messages.</p> <p>10. (For Recruiter) System notifies Moderator for approval.</p>
Alternative Flows	<p>4A. Missing or invalid data (e.g., short password):</p> <ul style="list-style-type: none"> - System shows field-level validation errors. <p>4B. Password does not meet complexity requirements:</p> <ul style="list-style-type: none"> - The system displays an error message outlining the complexity rules (e.g., "New password must be at least 8 characters long, contain numbers."). <p>5A. Email already exists:</p> <ul style="list-style-type: none"> - System prevents registration and suggests login or password reset. <p>6A. For Recruiter, moderator rejects profile:</p> <ul style="list-style-type: none"> - Recruiter receives notification and cannot use company features.
Pre-conditions	<p>1. User is not logged in.</p> <p>2. Registration page is accessible.</p>
Post-conditions	<p>1. Candidate account is created and active.</p> <p>2. Company account is created but set as pending.</p> <p>3. Moderator receives notification to review company registration.</p>
Special Requirements	<p>1. Passwords must be hashed and meet security criteria (min 8 characters).</p> <p>2. Email format must be valid.</p> <p>3. Company accounts must be manually approved by a Moderator before gaining full access.</p> <p>4. Email confirmation (optional enhancement) can be added.</p> <p>5. Rate-limiting may be applied to prevent spam registrations.</p>

2.1.4 Use-case: Password management

Use Case	Password Management
Brief Descriptions	This function allows a logged-in user to change their current password
Actors	Candidates, Recruiter, Moderator, Admin
Main Flow	<ol style="list-style-type: none"> 1. The user, while logged in, navigates to the "Change password" section. 2. The system displays an interface prompting the user to enter their current password, new password, and confirm new password. 3. The user enters their current password, then enters and confirms their desired new password. 4. The user clicks the "Change password" button. 5. The system authenticates the current password provided by the user. 6. The system validates the new password against complexity rules (if any) and ensures the new password and confirmation match. 7. If validation is successful, the system updates the user's password in the database. 8. The system confirms that the password has been successfully changed.
Alternative Flows	<ol style="list-style-type: none"> 5A. Case where the current password entered is incorrect: <ul style="list-style-type: none"> - The system displays an error message: "Current password is incorrect. Please try again." 6A. Case where new password fields are empty: <ul style="list-style-type: none"> - The system highlights the empty fields and displays an error message: "Please enter and confirm your new password." 6B. Case where new password does not meet complexity requirements: <ul style="list-style-type: none"> - The system displays an error message outlining the complexity rules (e.g., "New password must be at least 8 characters long, contains numbers.").

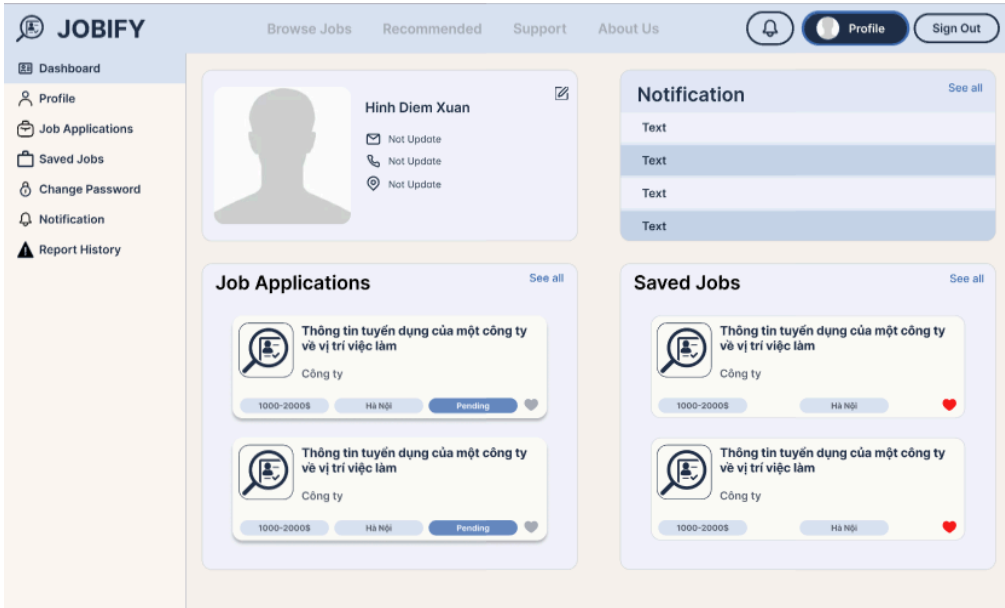

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

	<p>6C. Case where new password and confirmation do not match:</p> <ul style="list-style-type: none"> - The system displays an error message: "New password and confirmation do not match. Please re-enter." <p>6D. Case where new password is the same as the current password:</p> <ul style="list-style-type: none"> - The system displays an error message: "New password cannot be the same as your current password."
Pre-conditions	The user must be currently logged into the system.
Post-conditions	The user successfully changed the password and the new password is updated in the database.
Special Requirements	<p>1. Security:</p> <ul style="list-style-type: none"> - The current password must be authenticated before allowing a change. - New passwords must be securely hashed and stored. - Password complexity rules should be enforced. <p>2. Notifications to the user about a successful password change for security awareness.</p> <p>3. Interface: Clear form fields and immediate feedback on password strength and errors.</p>
Prototype	

2.1.5 Use-case: View/Edit Candidate profile

Use Case	View/Edit Candidate profile
Brief Descriptions	This use case allows Candidates users to view and update their respective profiles. Candidates can update personal information. This ensures up-to-date information is presented on job listings and candidate dashboards.
Actors	Candidate
Main Flow	1. User logs into the system.

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

	<ol style="list-style-type: none"> User click “Profile” button, navigates to their profile section System loads existing profile data. User updates profile fields: <ul style="list-style-type: none"> - Full name - Email - Gender - Phone number - Introduction - Address - Industry - GitHub, LinkedIn and Personal website - Skills - Work experience and Education User clicks “Save”. System validates inputs and saves changes to the database.
Alternative Flows	<ol style="list-style-type: none"> Required fields are missing or invalid (e.g., email format): <ul style="list-style-type: none"> - System highlights errors and prevents saving. Logo upload fails (unsupported format or file too large): <ul style="list-style-type: none"> - System cancels the upload and shows an error message.
Pre-conditions	<ol style="list-style-type: none"> User must be logged in. Profile must exist or be automatically created upon first access.
Post-conditions	<ol style="list-style-type: none"> Profile data is updated and visible on the appropriate pages.
Special Requirements	<ol style="list-style-type: none"> Profile UI must be responsive and accessible on all major browsers Autosave draft or prompt before navigating away with unsaved changes

Work Experience
Software Engineer
Tech Solution Inc.
March 2022 – Present
Achievements:

- Developed and maintained robust backend APIs using Python and Django, supporting over 100,000 daily active users.
- Collaborated with cross-functional teams to implement new features, reducing development cycle time by 15%.
- Optimized database queries, leading to a 25% improvement in application response time.

Education
Bachelor of Information Technology
University of Science - VNU HCM
Sep 2018 - Jun 2022
Achievements:

- GPA: 3.5/4.0
- Completed graduation thesis on 'AI Mobile App Development'

IELTS Certificate 7.0
IDP Education
Jun 2021
Achievements:

- Overall Band Score: 7.0 (Listening: 7.5, Reading: 7.0, Writing: 6.5, Speaking: 7.0).
- Achieved language proficiency for Postgraduate programs.

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

2.1.6 Use-case: View/Edit Recruiter profile

Use Case	View/Edit Recruiter profile
Brief Descriptions	This use case allows Recruiter users to view and update their respective profiles. Recruiter users can edit company-related details such as logo, company name, description, and website. This ensures up-to-date information is presented on job listings and candidate dashboards.
Actors	Recruiter
Main Flow	<ol style="list-style-type: none"> 1. User logs into the system. 2. User click “Profile” button, navigates to their profile section 3. System loads existing profile data. 4. User updates profile fields: <ul style="list-style-type: none"> - Company name - Company logo - Company size - Tax code and business license number - Industry - Description/About section - Address - Website & social links 5. User clicks “Save”. 6. System validates inputs and saves changes to the database. 7. (Optional) → System marks profile as “pending approval” if sensitive info (e.g., name, logo) was changed.
Alternative Flows	<ol style="list-style-type: none"> 4A. Required fields are missing or invalid (e.g., email format): <ul style="list-style-type: none"> - System highlights errors and prevents saving. 4B. Logo upload fails (unsupported format or file too large): <ul style="list-style-type: none"> - System cancels the upload and shows an error message.
Pre-conditions	<ol style="list-style-type: none"> 1. User must be logged in. 2. Profile must exist or be automatically created upon first access.
Post-conditions	<ol style="list-style-type: none"> 1. Profile data is updated and visible on the appropriate pages. 2. Logo is stored and linked correctly. 3. Moderators may be notified if company branding was modified.
Special Requirements	<ol style="list-style-type: none"> 1. Company Logo: must be .jpg or .png, square format, max size 2MB 2. Profile UI must be responsive and accessible on all major browsers 3. Autosave draft or prompt before navigating away with unsaved changes 4. Changes to company name/logo may require moderator re-approval

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

The screenshot shows the 'Jobify' dashboard with a sidebar menu containing 'Dashboard', 'Profile', 'My Jobs', 'Wallet', 'Change Password', 'Notification', and 'Report History'. The main content area is titled 'Company Details' and contains the following form fields:

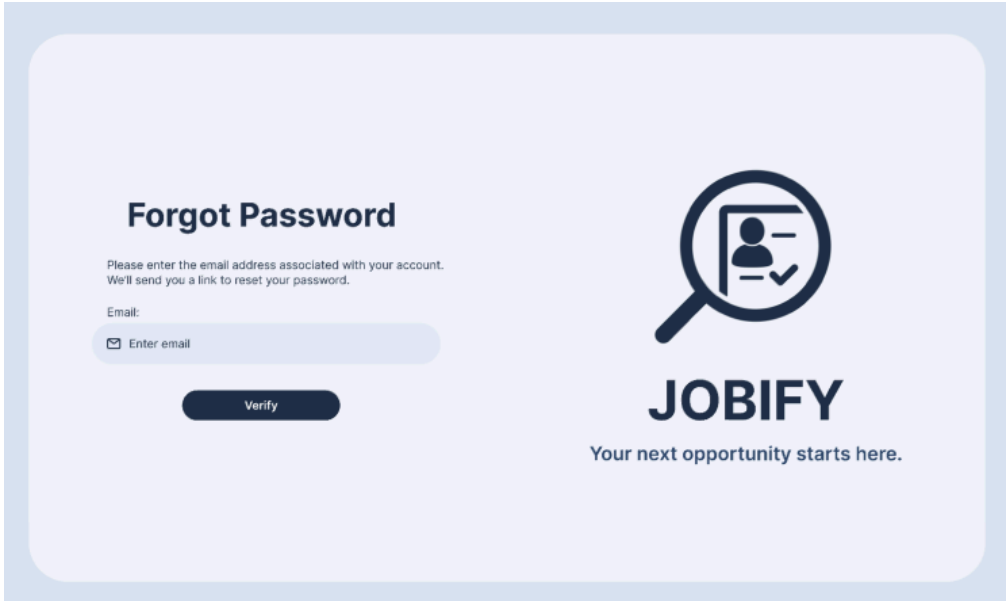

- Company name*:** Enter name
- Tax Code*:** Enter tax code
- Company Email*:** unilevervn@gmail.com
- Address*:** Add Address
- Description:** Enter description
- Company Size:** Enter company size (number)
- Industries*:** Add Industries (+)
- Company Website:** Enter website link
- Business License Number*:** Enter business license number
- Company Phone Number:** Enter company phone number

At the bottom of the form are 'Cancel' and 'Save' buttons. A logo placeholder with a magnifying glass icon is also visible.

2.1.7 Use-case: Forgot Password

Use Case	Forgot Password
Brief Descriptions	This use case allows users to reset their password if they have forgotten it by receiving a reset link via email.
Actors	Candidates, Recruiters, Moderators, Admins
Main Flow	<ol style="list-style-type: none"> The user clicks the "Forgot Password" link on the login page. The system displays a form asking for the user's registered email address. The user enters their email and clicks "Verify". The system validates the email: <ul style="list-style-type: none"> If valid, it generates a one-time token and sends a password reset email with a link. If the email is not found, it shows a generic message to avoid disclosing account existence. The user opens the email and clicks the link. The system verifies the token and shows a form to enter a new password. The user submits the new password. The system updates the password and displays a success message.
Alternative Flows	<ol style="list-style-type: none"> Invalid Email Format: <ul style="list-style-type: none"> The system prompts the user to enter a valid email address. Token Expired / Invalid: <ul style="list-style-type: none"> The system shows an error: "The reset link is invalid or expired." with an option to resend. Password Validation Failed: <ul style="list-style-type: none"> The system returns an error (e.g., "Password too short") and asks for a stronger password.

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

Pre-conditions	1. User has a registered account with a verified email. 2. The email system is configured and functional.
Post-conditions	1. User's password is securely updated. 2. Any previous sessions may be invalidated for security (optional).
Special Requirements	1. The reset link must expire within a defined time (e.g., 15–30 mins). 2. The reset token must be one-time use and securely encrypted. 3. Emails must use branded templates with secure HTTPS links. 4. Form should validate password strength client-side and server-side.

2.2 Job Interaction & Management

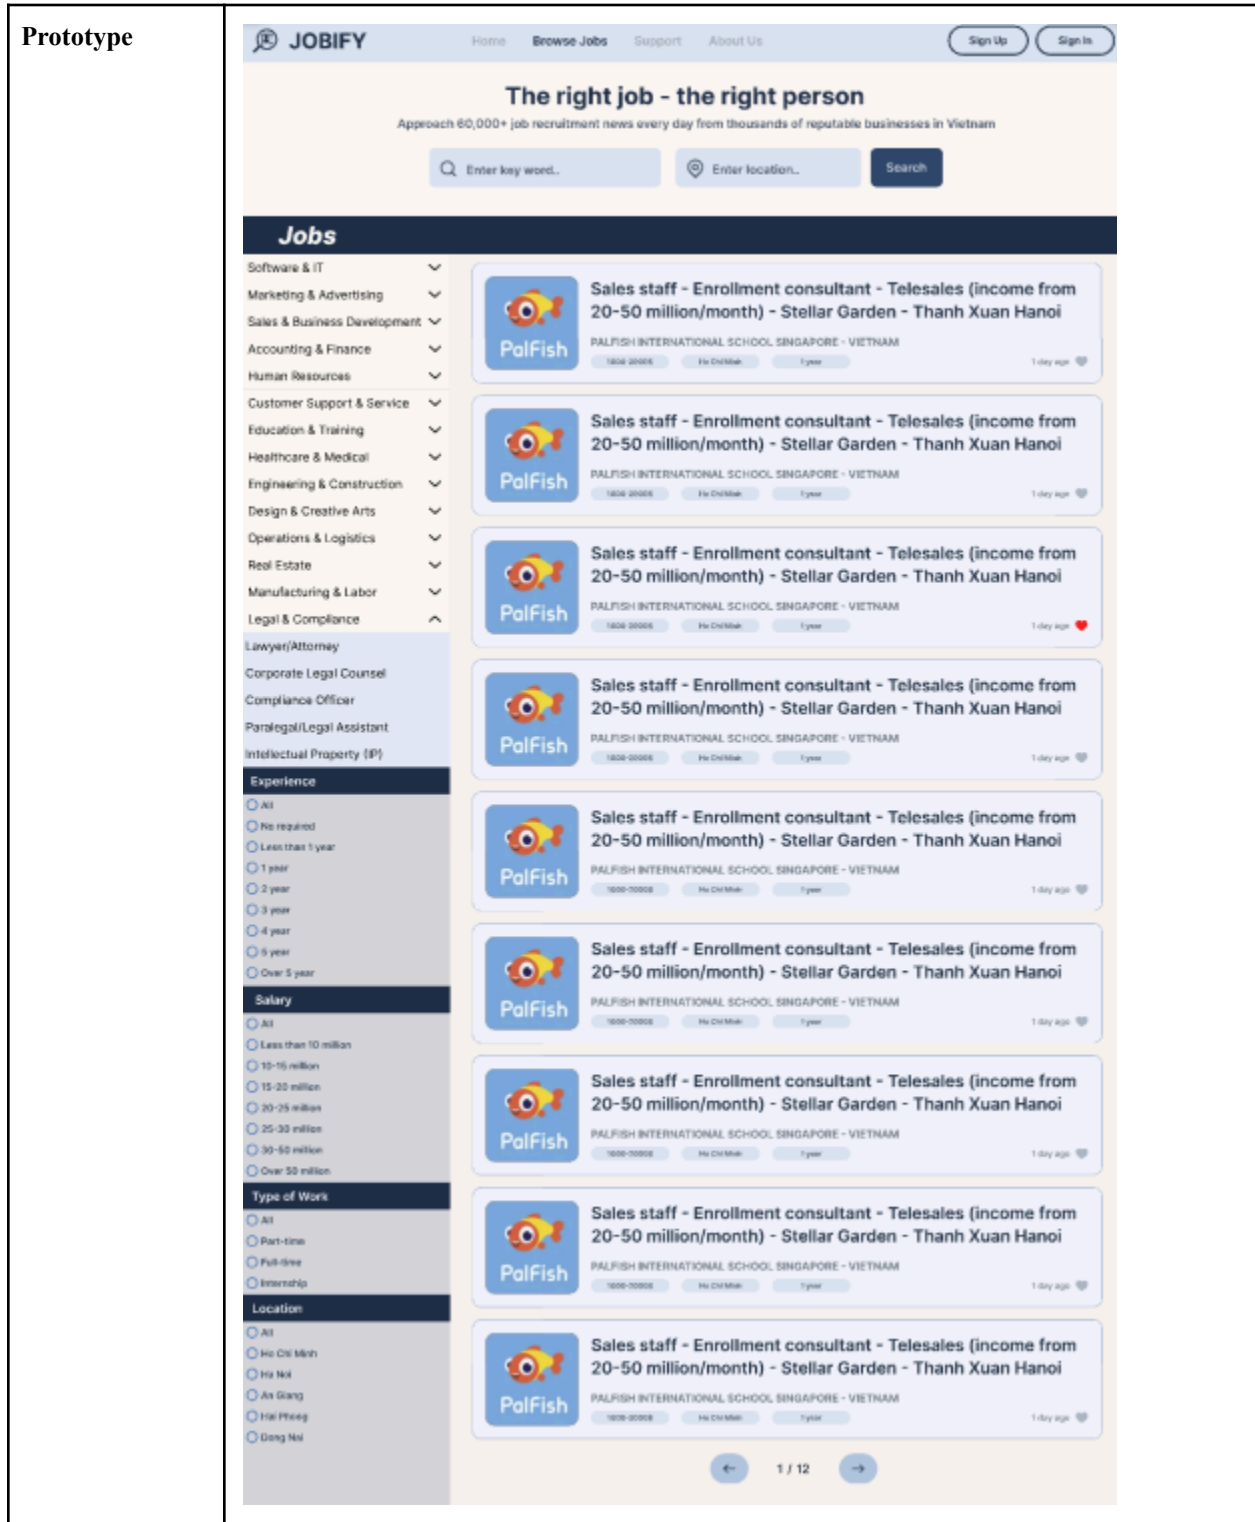

2.2.1 Use-case: Browse Job Listings

Use Case	Browse Job Listings
----------	---------------------

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

Brief Descriptions	This use case allows a Candidate to browse through a list of active job posts available on the platform. The candidate can scroll, view job summaries and click to see more detailed information.
Actors	Candidate
Main Flow	<ol style="list-style-type: none"> 1. Candidate navigates to the “Browse Jobs” section to view a list of all approved and currently active job posts. 2. Each job listing displays key information such as the job title, company, location, and salary, and allows the candidate to save the job. 3. Candidate scrolls through the listings to explore jobs of interest. 4. Candidate clicks on a job card to view more details.
Alternative Flows	<ol style="list-style-type: none"> 1A. Candidate Not Logged In: <ul style="list-style-type: none"> - If the candidate is not logged in, they can still view job listings but will be prompted to log in before applying or saving a job. 1B. No Job Listings Available: <ul style="list-style-type: none"> - If there are no active job postings, the system displays a message: “No job listings available at the moment.”
Pre-conditions	There is at least one job posting that has been approved and is currently active.
Post-conditions	<p>Candidate may save the job, or log in (if not logged in) to take further actions.</p> <p>Candidate is able to view job details and decide whether to apply.</p>
Special Requirements	<p>Job listings must be:</p> <ul style="list-style-type: none"> - Clearly readable on all screen sizes. - Optimized for performance and fast loading. - Search engine for public-facing listings.

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

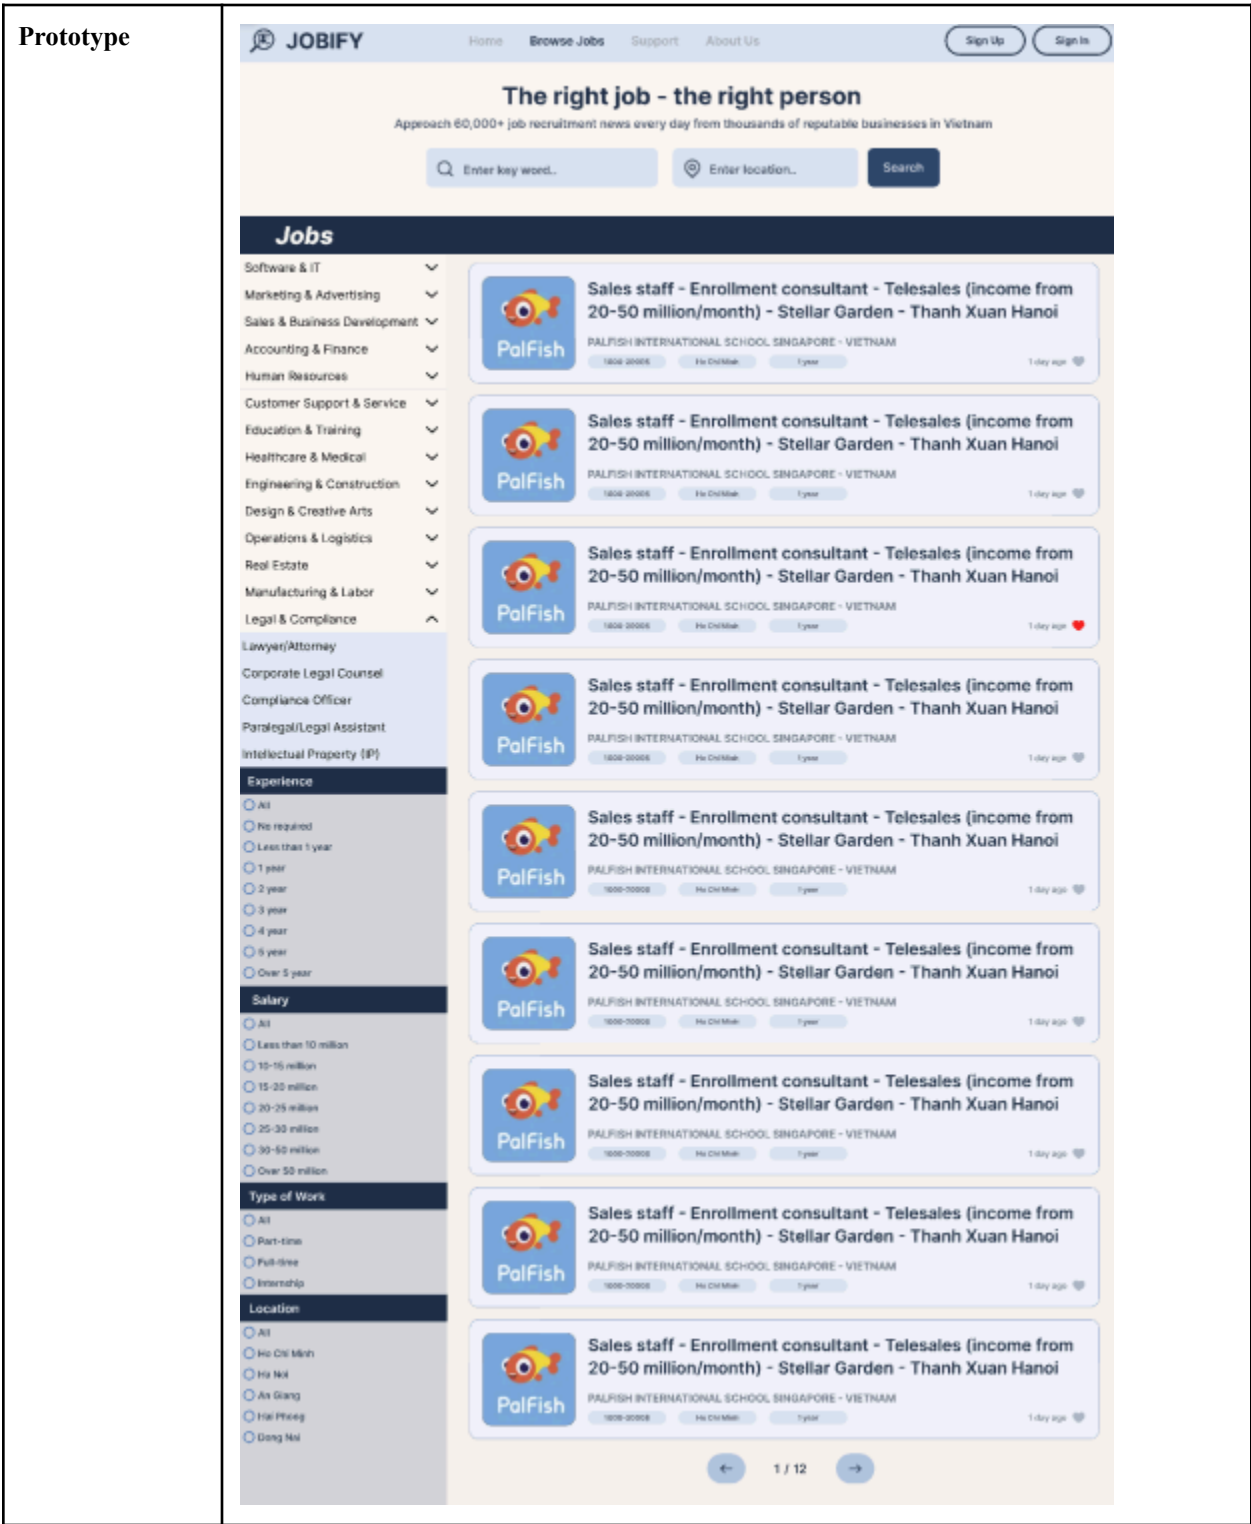

2.2.2 Use-case: Search Jobs

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

Use Case	Search Jobs
Brief Descriptions	This use case enables a Candidate to search for job postings using a variety of tools, including keyword-based search, advanced filters (such as location, salary, job type).
Actors	Candidate
Main Flow	<ol style="list-style-type: none"> 1. Candidate can access the search bar, apply filters. 2. Candidate enters a keyword (e.g., "Software Engineer") or selects filters such as: <ul style="list-style-type: none"> - Location - Salary range - Experience level - Industry - Type of work (full-time, part-time) 3. System displays a list of matching job postings. 4. Candidate browses through the results and selects a job to view more details.
Alternative Flows	<ol style="list-style-type: none"> 2A. No matching jobs found: <ul style="list-style-type: none"> - System displays: "No jobs match your search criteria." 3A. Not Logged In: <ul style="list-style-type: none"> - They can perform basic keyword/filter searches.
Pre-conditions	There is at least one job posting that has been approved and is currently active
Post-conditions	<ol style="list-style-type: none"> 1. A list of job postings relevant to the search is presented. 2. The candidate can save jobs and access each posting to view details.
Special Requirements	<ol style="list-style-type: none"> 1. Real-time search response: the system must return search results within 2 seconds for standard queries. 2. Filters and keyword searches should dynamically update results without a full page reload. 3. Advanced filtering: Users must be able to combine multiple filters (e.g., "Remote + Full-time + Salary > \$2000").

UCS	

2.2.3 Use-case: View Job Details

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

Use Case	View Job Detail
Brief Descriptions	Candidate views the full details of a job posting, including job title, company info, responsibilities, requirements, and how to apply.
Actors	Candidate, Recruiter, Moderator
Main Flow	<ol style="list-style-type: none"> The Actor (typically a Candidate) navigates to a job listing page and clicks on a job title or “View Details” button. The system retrieves the full job details from the database, including: <ul style="list-style-type: none"> - Job Title - Company Name, Logo, and Location - Job Description - Requirements - Benefits - Job Type (Full-time, Part-time, etc.) - Salary Range - Application Deadline - Tags or required skills The system renders and displays all job details in a mobile-friendly and structured format. Based on the Actor's role: Candidate sees options: Apply, Save Job, Report Job, View Company Profile Recruiter sees: Edit Job, View Applicants Candidate may proceed to apply or save the job.
Alternative Flows	<ol style="list-style-type: none"> 1a. Job is expired or deleted → show: <i>"This job is no longer available."</i> 4a Candidate not logged in clicking “Apply”, “Save” or “report” redirects to login page
Pre-conditions	Job post exists and is approved.
Post-conditions	Candidate is able to view job details and decide whether to apply.
Special Requirements	Job details must be readable, mobile-friendly, and SEO optimized.

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

Actors	Candidate
Main Flow	<ol style="list-style-type: none"> 1. Candidate views a list of job postings or a job detail page. 2. Candidate clicks the “Heart” icon on a job. 3. System stores the job ID in the user’s saved list. 4. System updates the UI to reflect that the job is bookmarked. 5. Candidate can view saved jobs from the “Saved Jobs” section.
Alternative Flows	<ol style="list-style-type: none"> 2A. User is not logged in: <ul style="list-style-type: none"> - System prompts the user to log in before saving the job. 3A. Job was already saved: <ul style="list-style-type: none"> - System removes the job from the saved list and updates the UI accordingly.
Pre-conditions	<ol style="list-style-type: none"> 1. Candidate must be logged in. 2. At least one job is displayed.
Post-conditions	<ol style="list-style-type: none"> 1. The selected job is saved or removed from the user’s saved jobs list. 2. Candidate can later revisit saved jobs from their profile or dashboard.
Special Requirements	<ol style="list-style-type: none"> 1. Saved jobs must persist in the database or user session. 2. System should support toggling bookmark state (save/remove). 3. The “Saved Jobs” section should be accessible from the profile or dashboard. 4. Each job card should visually indicate if it has been bookmarked.
Prototype	

2.2.5 Use-case: Apply Job

Use Case	Apply Job
-----------------	-----------

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

Brief Descriptions	Allows a Candidate to submit a job application for a specific job post by attaching their resume and optional cover letter.
Actors	Candidate
Main Flow	<ol style="list-style-type: none"> 1. Candidate logs into their account. 2. Candidate browses job listings and selects a job. 3. Candidate clicks “Apply” on the job detail page. 4. Candidate selects a resume file and optionally adds a cover letter. 5. Candidate submits the application. 6. System validates inputs and creates a job application record. 7. System notifies the job poster (Recruiter) of the new application. 8. System confirms submission to the Candidate.
Alternative Flows	<ol style="list-style-type: none"> 4A. No resume selected: <ul style="list-style-type: none"> - System displays a validation message and prevents submission. 5A. Invalid file upload: <ul style="list-style-type: none"> - System prompts Candidate to re-upload a valid file.
Pre-conditions	<ol style="list-style-type: none"> 1. Candidate is logged in. 2. Job post status is Active.
Post-conditions	<ol style="list-style-type: none"> 1. New application record is created and update status “waiting”. 2. Recruiter is notified.
Special Requirements	<ol style="list-style-type: none"> 1. Resume files must meet defined type/size restrictions (pdf, docx with max size 5MB). 2. Application submission should be logged for audit.

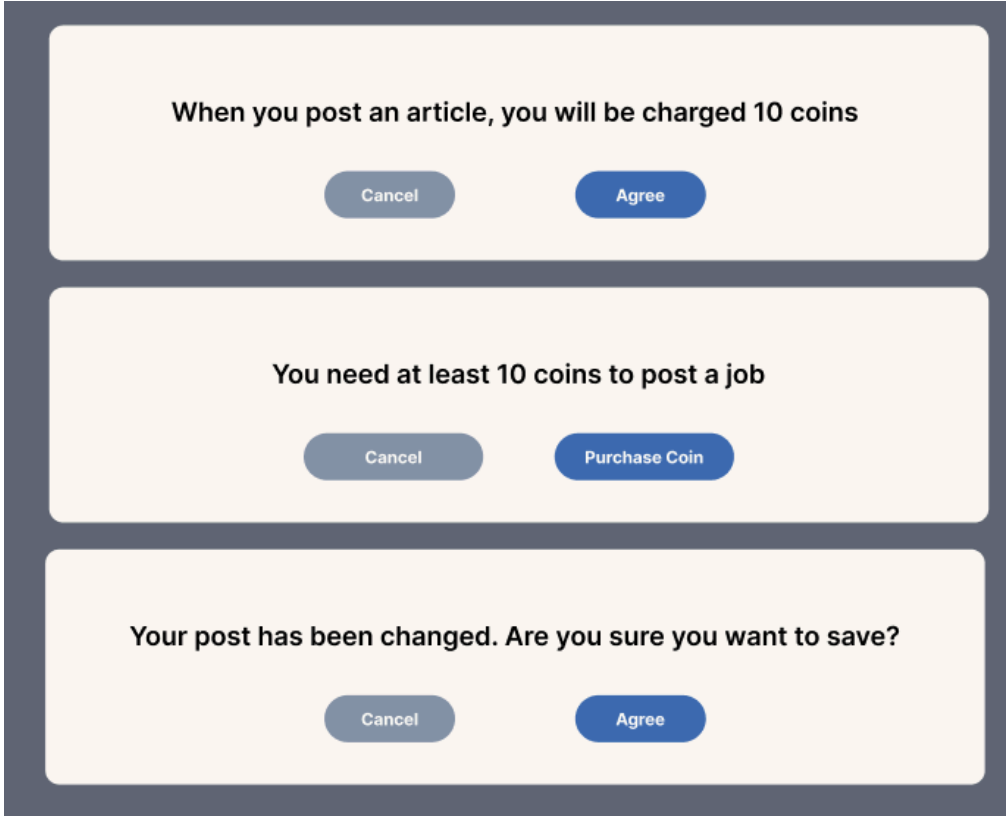

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

	<p>7. The system updates the application status to "Cancelled", logs the action, and optionally notifies the employer.</p> <p>8. A success message is shown, and the updated status is reflected in the list.</p>
Alternative Flows	<p>3A. Application already reviewed or locked:</p> <ul style="list-style-type: none"> - If the application is already marked as "Under Review" or "Shortlisted" (or any non-cancellable status), the system disables the cancel button and displays a message: "You cannot cancel this application as it is already under review." <p>6A. User cancels the confirmation:</p> <ul style="list-style-type: none"> - No changes are made. Return to application list.
Pre-conditions	<p>1. The candidate must be logged in.</p> <p>2. The application must exist and belong to the logged-in user.</p> <p>3. The current application status must be cancellable ("Pending").</p>
Post-conditions	<p>1. The application status is changed to "Cancelled".</p> <p>2. The action is logged in APPLICATION_STATUS_HISTORY.</p> <p>3. The job's application count updated (optional).</p> <p>4. An optional notification may be sent to the recruiter.</p>
Special Requirements	<p>1. Confirmation Dialog: Cancel action must require user confirmation.</p> <p>2. Status Restrictions: Only certain status ("Pending") are cancellable.</p> <p>3. Audit Logging: Must log cancellation to preserve application history.</p> <p>4. UI Feedback: Immediate feedback to the user on success/failure.</p>

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

	review), close jobs that are no longer accepting applicants, and delete outdated or incorrect posts.
Actors	Recruiter, Moderator, Admin
Main Flow	<p>Purchase Coin (if not enough coin): Refer to Use Case: Purchase Coins</p> <p>Create Job Post (Recruiter only):</p> <ol style="list-style-type: none"> 1. Recruiter clicks “Create Job Post”. 2. Recruiter fills in job info. 3. System checks if the Recruiter has ≥ 10 coins. 4. If yes: system deducts 10 coins and marks post as Pending Approval. 5. System notifies the Moderator for review. <p>Edit Job Post (Recruiter only):</p> <ol style="list-style-type: none"> 6. Recruiter clicks “Edit” on a draft or pending job post. 7. Recruiter updates job details and saves. 8. If the post is live, changes may require re-approval. <p>Publish Job Post (Recruiter only):</p> <ol style="list-style-type: none"> 9. After Moderator approval, the job is automatically published (status = Active). 10. Job is now visible to candidates. <p>Close Job Post (Recruiter only):</p> <ol style="list-style-type: none"> 11. Recruiter selects an active job and clicks “Close”. 12. System updates status to Closed and hides it from candidates. 13. Application form is disabled. <p>Delete Job Post:</p> <ol style="list-style-type: none"> 14. Recruiter, Moderation and Admin can click “Delete” on a post (draft, closed, or rejected). 15. System confirms and removes the post permanently.
Alternative Flows	<p>3A. Not enough coins to post job:</p> <ul style="list-style-type: none"> - System blocks post and shows: “You need at least 10 coins to post a job.” <p>4A. Post rejected by Moderator:</p> <ul style="list-style-type: none"> - System notifies Recruiter and marks post as Rejected. <p>9A. Job expired (past deadline):</p> <ul style="list-style-type: none"> - System auto-updates status to Expired.
Pre-conditions	<p>Recruiter accounts must be approved by the Moderator.</p> <p>For posting: Recruiter must have at least 10 coins.</p>
Post-conditions	<ol style="list-style-type: none"> 1. Job post is created and goes through an appropriate lifecycle (Pending, Active, Closed, Deleted). 2. Coin balance is deducted appropriately. 3. Candidates can see and apply only to active posts.
Special Requirements	<ol style="list-style-type: none"> 1. Each job post must be assigned a unique ID. 2. Coin transactions must be atomic: deduct only if the job is saved successfully. 3. System should log status changes with timestamp. 4. Posts may be auto-closed after the deadline or manually closed. 5. Recruiter can filter/manage posts by status: Draft, Pending, Active, Closed, Rejected.

HTML

Java

WORK EXPERIENCE

Software Engineer
Tech Solution Inc.
 March 2022 – Present
 Achievements:

- Developed and maintained robust backend APIs using Python and Django, supporting over 100,000 daily active users.
- Collaborated with cross-functional teams to implement new features, reducing development cycle time by 15%.
- Optimized database queries, leading to a 25% improvement in application response time.

EDUCATION

Bachelor of Information Technology
University of Science - VNU HCM
 Sep 2018 - Jun 2022
 Achievements:

- GPA: 3.5/4.0
- Completed graduation thesis on 'AI Mobile App Development'

IELTS Certificate 7.0
IDP Education
 Jun 2021
 Achievements:

- Overall Band Score: 7.0 (Listening: 7.5, Reading: 7.0, Writing: 6.5, Speaking: 7.0).
- Achieved language proficiency for Postgraduate programs.

2.3.4 Use-case: Update Application Status

Use Case	Update Application Status
Brief Descriptions	Allows a Recruiter to update the status of a job application (pending, shortlist, reject, interview request, hire).
Actors	Recruiter
Main Flow	<ol style="list-style-type: none"> 1 .Recruiter logs in. 2. Navigates to job applications for a specific post. 3. Selects an application to view detail. 4. Chooses a new status from available options. 4. System updates status and notifies the Candidate.
Alternative Flows	<p>4A. Invalid status transition:</p> <ul style="list-style-type: none"> - System disallows if not permitted (e.g., hiring a rejected candidate). <p>4B. If reject, recruiter may fill reason</p>

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

Pre-conditions	Recruiter is logged in and owns the job post.
Post-conditions	Application status is updated and Candidate is notified.
Special Requirements	Status changes must be recorded in application history with timestamp and Recruiter ID.
Prototype	

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

2.4 Recommendations & Matching

2.4.1 Use-case: Generate Job Matches

Use Case	Generate Job Matches
Brief Descriptions	This use case describes how the System automatically matches job postings with candidate profiles based on predefined criteria or AI algorithms. The goal is to improve visibility of relevant jobs to candidates and help recruiters discover suitable applicants.
Actors	AI System
Main Flow	<ol style="list-style-type: none"> 1. Candidate logs into the platform or updates their profile (experience, job preferences, etc.). 2. System retrieves updated candidate data, including: work experience, desired job type (e.g., full-time, part-time, remote), preferred industries and locations, salary expectations (if provided) 3. The system filters and ranks job postings using AI algorithms, based on the following priority (from highest to lowest relevance): <ul style="list-style-type: none"> - Industries → Experience → Type of Work → Location. - Each job is scored using a weighted model where higher-priority factors contribute more to the total match score. 4. Top-ranked matched jobs are saved as personalized recommendations for the candidate. 5. Candidate is shown matched jobs on their dashboard (e.g., “AI-recommended for you”) with options to: <ul style="list-style-type: none"> - View full job details - Save job
Alternative Flows	<ol style="list-style-type: none"> 3A. If a candidate's profile is incomplete, the system will display the message: <ul style="list-style-type: none"> - “Please complete your profile to receive more accurate job recommendations.” - However, the system will still suggest relevant jobs based on the available information provided. 3B. The AI will prioritize job recommendations in the following order of relevance: <ul style="list-style-type: none"> - If no jobs match any of the provided criteria, the system will display: “There are currently no jobs that match your profile. However, here are some opportunities you might want to explore.” - It will then show a selection of randomly suggested job postings.
Pre-conditions	<ol style="list-style-type: none"> 1. Candidate has an active account and is logged in. 2. Candidate profile includes key fields such as experience, and job preferences. 3. There are active job postings available in the system. 4. AI matching engine is properly trained and operational.
Post-conditions	<ol style="list-style-type: none"> 1. A personalized list of recommended jobs is generated and shown to the candidate. 2. System may store these recommendations for analytics or improvement of future suggestions. 3. Candidate may take follow-up actions (e.g., apply, save, view detail).
Special Requirements	<ol style="list-style-type: none"> 1. Real-time / Near-real-time Execution: <ul style="list-style-type: none"> - Matching should be triggered automatically on profile update. - Results must be shown within ~2 seconds to ensure good UX.

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

	2. Privacy & Control: <ul style="list-style-type: none"> - All personal data used must follow platform's data privacy policy.
Prototype	N/A

2.4.2 Use-case: View Recommended Jobs

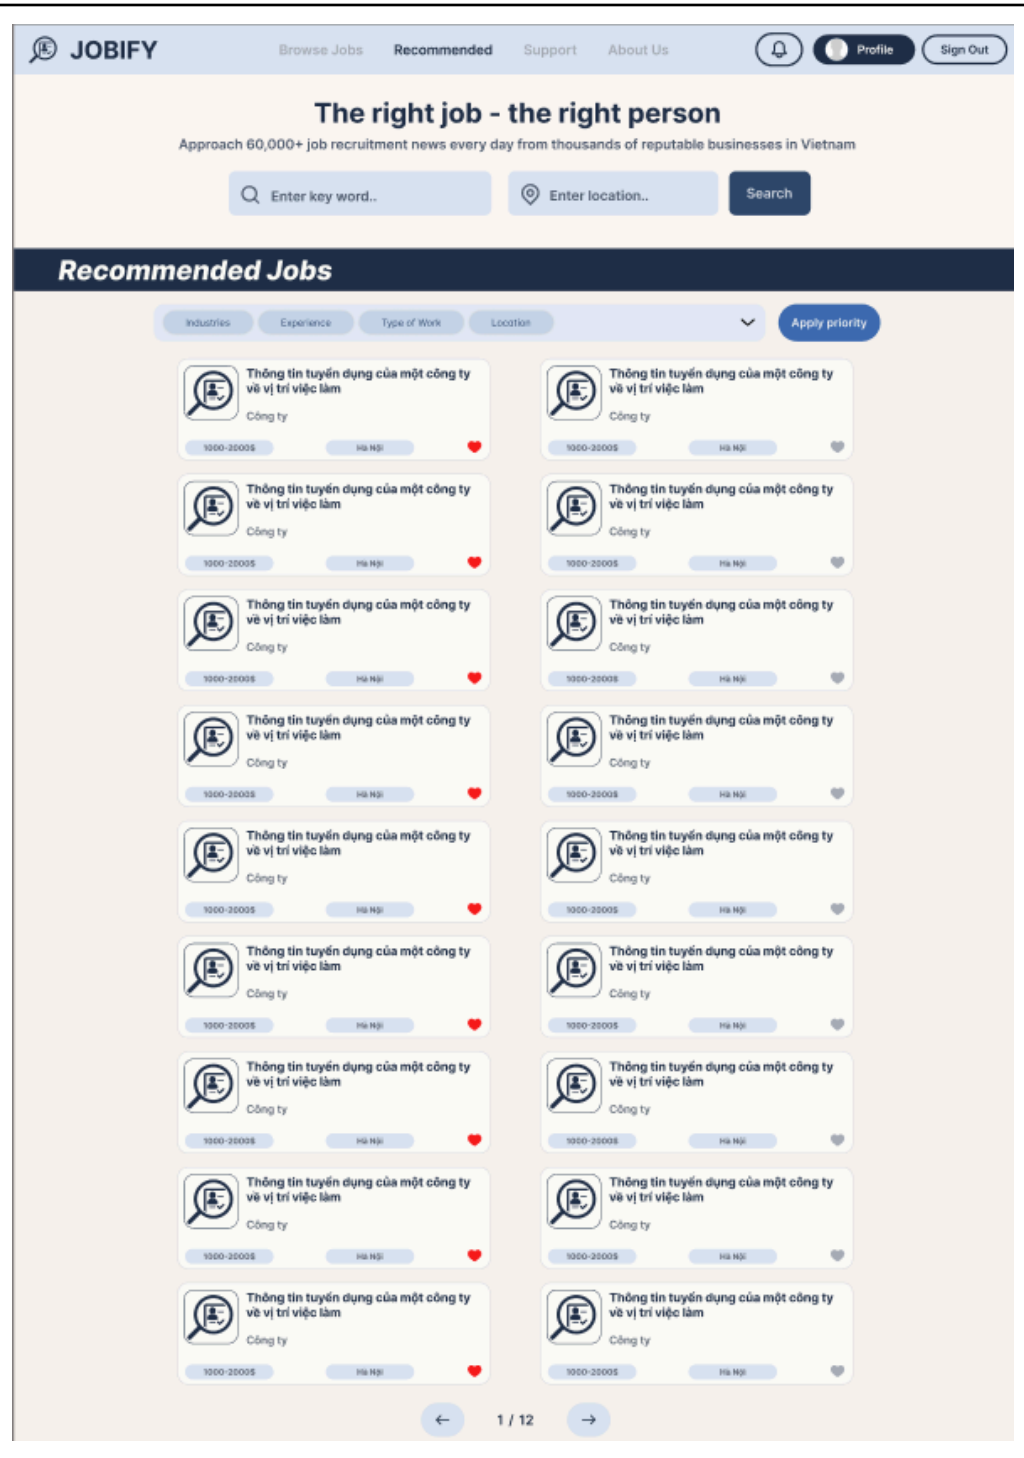

Use Case	View Recommended Jobs
Brief Descriptions	This use case allows a Candidate to view a personalized list of job postings recommended by the system based on their profile, preferences, and AI-generated matching.
Actors	Candidate
Main Flow	<ol style="list-style-type: none"> 1. Candidate logs into the platform or updates their profile (experience, job preferences, etc.). 2. Candidate navigate to the "Recommended Jobs" section on their homepage. 3. System retrieves job recommendations previously generated by the AI matching engine. 4. The list of recommended jobs is displayed in ranked order (by relevance). 5. The candidate views the list of AI-recommended jobs on Jobs Recommended. <ul style="list-style-type: none"> - A built-in filter and sorting panel allows the candidate to refine the suggestions (e.g., by location, type of work, industry). - When the candidate applies new filters or adjusts the priority of matching criteria, the AI dynamically re-generates and re-ranks the job recommendations based on the updated preferences. - The updated list is shown, maintaining a personalized experience with the most relevant jobs at the top. 6. Each job card shows key information: job title, company, location, salary and save icon. 7. Candidate clicks on any job to view full details or save job. 8. System may record candidate interactions for future recommendation improvement.
Alternative Flows	2A. Candidate Not Logged In <ul style="list-style-type: none"> - Candidate must log in to view personalized recommendations. Redirect to login page with message: "Sign in to view your recommended jobs." 2B. No Recommendations Available <ul style="list-style-type: none"> - If there are no available matches, show: "There are currently no jobs that match your profile. However, here are some opportunities you might want to explore." - It will then show a selection of randomly suggested job postings. 2C. System Error <ul style="list-style-type: none"> - If recommendation data cannot be retrieved due to a system error, display a message: "System error. Please try again later." Include a retry option.
Pre-conditions	<ol style="list-style-type: none"> 1. Candidate has an active account and is logged in. 2. Job recommendations have been generated by the system. 3. Candidate has a sufficiently complete profile for recommendations to exist.
Post-conditions	<ol style="list-style-type: none"> 1. Candidate views recommended job listings. 2. Candidate may take further actions such as view detail or saving jobs. 3. System may log interactions for analytics and model improvement.
Special Requirements	<ol style="list-style-type: none"> 1. Explanation of Match (Optional): Option to show why a job is recommended (e.g., "Matched industry: Software developer").

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

	<p>2. Interaction Tracking: System tracks apply/save/skip events to improve future recommendations.</p> <p>3. Privacy Respect: Only jobs that match candidate's visibility and data privacy settings should be shown.</p> <p>4. Regular Refresh: Recommendations should be refreshed regularly (e.g., daily or when profile changes).</p>

UCS	

Pre-conditions	Recruiter is logged in.
Post-conditions	Transaction history is displayed.
Special Requirements	Transaction records must include date, amount, type, and description.
Prototype	 <p>The screenshot displays the Jobify web application interface. The top navigation bar includes links for Dashboard, Support, and About Us, along with a notification bell, a profile icon, and a Sign Out button. The left sidebar contains a menu with options: Dashboard, Profile, My Jobs, Wallet (highlighted), Change Password, Notification, and Report History. The main content area features a 'Coin Balance' section showing 1,490 coins, a 'Purchase Coins' section with a current price of 1 coin for 1,000 VND and a 'Purchase Coins' button, and a 'Transaction History' table. The table lists transactions from 05/07/2025, all of which are 'Job post' type, with a description of 'Standard coin pack purchase for job postings' and an amount of -10.</p>

2.6 Notifications

2.6.1 Use-case: Receive / View Notifications

Use Case	Receive / View Notifications
Brief Descriptions	Allows users to receive and view notifications related to application status, job status, approval results, wallet alerts, moderation issues, user reports, or system updates.
Actors	Candidate, Recruiter, Moderator, Admin
Main Flow	<ol style="list-style-type: none"> 1. Actor logs into the system. 2. The system checks for unread notifications and displays an alert if any exist. 3. Actor clicks the notification icon or accesses the notification center. 4. The system displays a list of notifications sorted by timestamp (most recent first). 5. Actor selects a notification to view its content. 6. The system displays the notification details and marks it as “read”. <ul style="list-style-type: none"> - If the actor is a Candidate, notifications may include: application status, job status changes, interview results. - If the actor is a Recruiter, notifications may include: new candidate applications, responses to interview invitations, approvals required, or wallet alerts.

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

	<ul style="list-style-type: none"> - If the actor is a Moderator, notifications may include: flagged content, user reports, or moderation requests. - If the actor is an Admin, notifications may include: system errors, escalated reports, or audit logs.
Alternative Flows	No new notifications: <ul style="list-style-type: none"> - 4A. The system does not display any new notification indicator. - 4B. The actor can still access the notification page to view previous messages.
Pre-conditions	1. Actor is authenticated (logged in). 2. Notifications have been generated for the actor by the system.
Post-conditions	1. Notifications are displayed. 2. Viewed notifications are marked as “read”. 3. View actions may be logged with timestamps.
Special Requirements	1. Accessible via both web and mobile platforms. 2. Retention period for notifications ranges from 30–90 days. 3. Users can manage read/unread status.
Prototype	

2.6.2 Use-case: Mark Notifications

Use Case	Mark Notifications
Brief Descriptions	Allows users to manually mark notifications as read or dismiss them to remove from the visible list.
Actors	Candidate, Recruiter, Moderator, Admin
Main Flow	1. Actor logs into the system.

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

	2. The system displays the list of notifications. 3. Actor can “Dismiss” or “Mark Notifications As Read” 4. The notification status is updated, and the UI reflects the change (e.g., no longer marked as "new"). <ul style="list-style-type: none"> - Candidate: marks job-related as read/dismissed after review. - Recruiter: dismisses notifications about completed candidate actions. - Moderator: clears moderation alerts after resolving flagged content. - Admin: marks system alerts or logs as read or dismisses resolved reports.
Alternative Flows	N/A
Pre-conditions	1. User is logged in. 2. Notifications are available to take action on.
Post-conditions	1. UI reflects the changes (read/dismissed). 2. Changes may be logged for audit.
Special Requirements	Mobile-friendly interaction design.
Prototype	N/A

2.6.3 Use-case: Send System Announcements

Use Case	Send System Announcements
Brief Descriptions	Allows Admins to compose and send system-wide or targeted announcements to users. These announcements may include important updates, maintenance notices, policy changes, etc.
Actors	Admin (sends) → All users or targeted user groups (receive)
Main Flow	1. Admin logs into the system with appropriate permissions. 2. Admin navigates to the Announcement Management interface. 3. Admin clicks “Create Announcement”. 4. Admin enters announcement title, message content and file attachment. 5. Admin selects the target audience: <ul style="list-style-type: none"> - All users - Specific roles (e.g., Candidates, Recruiters) 6. Admin clicks “Send” or “Schedule”. 7. System delivers announcements and logs the action.
Alternative Flows	Missing required fields: <ul style="list-style-type: none"> - 4A. Admin tries to submit the form with missing title or message. - 4B. System displays error: <i>"Title and message are required."</i>
Pre-conditions	1. Admin is authenticated and has “Announcement” permission. 2. System is accessible and supports sending notifications.
Post-conditions	1. Announcement is delivered to selected recipients. 2. Recipients see announcements in their notification center.

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

	3. System logs announcement content, sender, timestamp, and delivery status.
Special Requirements	1. Announcement components (title, messages, attachment). 2. Delivery via in-app notification. 3. Scheduled announcements must support timezone settings. 4. Preview before sending. 5. Must support announcement expiration (auto-remove). 6. Audit trail of all announcements sent.

2.7.7 Use-case: Manage Job Categories

Use Case	Manage Job Categories
Brief Descriptions	Enables authorized users to manage classification data such as job categories, required skills, industries, and other tagging elements used across the platform.
Actors	Recruiter, Admin, Moderator
Main Flow	<ol style="list-style-type: none"> 1. Actor logs into the system. 2. Navigates to the “Job Categories” section.

Jobify	Version: 1.18
Use-Case Specification:	Date: 02/08/2025
UCS	

	<p>3. The system displays a list of existing job industries, and related taxonomies.</p> <p>4. Actor performs one or more of the following actions:</p> <ul style="list-style-type: none"> - Add new industry - Edit existing items (e.g., rename) - Delete unused entries (if allowed) - Reorder categories for better UI/UX <p>5. System validates inputs and updates the data.</p> <p>6. The updated list is reflected across the platform for job postings and searches.</p> <ul style="list-style-type: none"> - Recruiters request to add new tags when they create job post. - Moderators may clean or adjust tags to ensure consistency. - Admins have full access including system-wide structural changes.
Alternative Flows	<p>Duplicate entry detected:</p> <ul style="list-style-type: none"> - 4A. Actor attempts to add a category that already exists. - 4B. System blocks the action and shows: <i>"This item already exists."</i> <p>Invalid input:</p> <ul style="list-style-type: none"> - 4A. Actor submits a form with empty or invalid values. - 4B. System shows: <i>"Please enter a valid name."</i> <p>Permission denied:</p> <ul style="list-style-type: none"> - 4A. Actor tries to perform an action not allowed by their role. - 4B. System shows: <i>"You do not have permission to perform this action."</i>
Pre-conditions	<p>1. Actor is authenticated.</p> <p>2. Actor has permissions to access taxonomy management.</p>
Post-conditions	<p>1. The classification data (categories, setting.) is updated and reflected in related modules.</p>
Special Requirements	<p>1. Auto-suggestion and search for existing tags.</p> <p>2. Validation to avoid redundancy and ensure data integrity.</p> <p>3. Role-based permissions for different levels of control.</p> <p>4. Audit logs for changes made to classification data.</p>
